

# KIRAN S BALIGA

+91 9544737577 · Bangalore, India (Open to relocate) · kiransbaliga@gmail.com · LinkedIn · Website

## SKILLS

**Languages:** JavaScript, Python, Ruby, Dart, SQL, C++, C

**Technologies:** Node.js, Django, Rails, React, Flutter, PostgreSQL, MongoDB, RESTful APIs, GraphQL, AWS, MCP, AI agents

## EXPERIENCE

**Ultrahuman**  
*Backend Engineer (Ruby on Rails) — Remote*

Mar 2026 – Present

- Architected and scaled AI-powered health reporting and growth platforms serving **5M+** users, delivering personalized reports and promotions through LLM workflows, experimentation frameworks, and automated quality-control systems.
- Reduced translation processing failures by **~67%** by enhancing the company's AI localization platform with automated quality checks and error-recovery workflows.
- Developed a dynamic cross-product upsell system based on user behavior & cohort processing, achieving **~8k+** conversions in two months.

**Keyvalue Software Systems**  
*Associate Software Engineer (Node.js, Django, FastAPI) — Kerala*

Sep 2023 – Feb 2026

### Pencil | B2B AI Ads Platform

- Refactored distributed microservices and implemented event-driven processing as part of a platform-wide backend overhaul, improving scalability and reducing infrastructure costs.
- Enabled tenant-specific customization by building a **metadata-driven multi-tenant schema** that supported configurable fields, types & lookup values.
- Improved document generation performance by migrating rendering to server-side infrastructure, reducing export load times by **30–40%** and improving PDF generation speed by **65%**.

### Siren | Communication Rails for AI Agents

- Accelerated AI agent orchestration by building **core communication modules** enabling efficient multi-agent workflows.
- Reduced AI feature development time by **~80%** by building JavaScript and Python SDKs, an **MCP server**, and integrations for OpenAI and CrewAI, standardizing AI development across teams.
- Published **SDKs to NPM and PyPI (160+ peak downloads)**, improving adoption and release reliability.

### Other Client Projects

- Architected scalable pipelines integrating **Salesforce**, improving API performance by **12%** through backend caching & database optimizations.
- Developed an LLM-powered parsing pipeline using **Python** and **FastAPI** to automate data extraction from unstructured content for AI systems.
- Streamlined inventory and order processing by implementing robust service architectures, significantly reducing system overhead for e-commerce workflows.

**Tgh Tech**  
*Full Stack Engineer*

May 2022 – Oct 2022

- Built a full-stack mental health platform with **Django**, implementing content sharing, anonymous therapist messaging, and appointment scheduling workflows.
- Built and deployed scalable backend services on AWS, ensuring reliable performance and secure user experiences.

**Airpmo**  
*Flutter Developer (Part-time)*

Jun 2021 – Dec 2021

- Built key Flutter features for a construction SaaS platform that streamlined personnel, materials, equipment, and subcontractor operations.
- Improved project collaboration and data synchronization by **~20%** by developing features that connected stakeholders across 10+ active construction and manufacturing projects.

## PROJECTS

### Multi-Task Federated Learning for Deep Neural Networks

- Built an AI framework for federated and multi-task learning, enabling personalized model training while preserving privacy and security.

## EDUCATION

**APJ Abdul Kalam Technological University | GPA: 8.43 / 10**  
*B.Tech, Computer Science and Engineering (Minor in ECE) — Kerala, India*

2023
