

# KIRAN S BALIGA

+91 9544737577 · Kerala (Open to relocate) · kiransbaliga@gmail.com · [LinkedIn](#) · [Website](#)

## SKILLS

**Languages:** TypeScript, Python, Ruby, SQL

**Technologies:** Ruby on Rails, Node.js, React, Docker, PostgreSQL, Kubernetes, MongoDB, GraphQL, AWS, MCP

## EXPERIENCE

### Ultrahuman

Mar 2026 – June 2026

Backend Engineer — Remote

- Architected and owned the end-to-end **LLM health-reporting pipeline**, ingesting multi-modal diagnostics across **10+** lab stations (DEXA, VO2 max, APIs, PDFs) to extract biomarkers and generate **15-page** clinical performance plans for doctors.
- Ported the **SpO2 algorithm** from Ruby backend services to **Kotlin Multiplatform** for **on-device execution**, achieving **99%+** parity on ring wearer data and cutting batch delays for an estimated **~80%** latency reduction.
- Enhanced the LLM translation pipeline for CJK languages via **trademark glossaries**, **context injection**, and **two-stage prompt caching**, boosting quality from **86% to 91%** and saving **~67%** tokens via **Anthropic Batch API**.
- Developed a dynamic cross-product **recommendation engine** using **behavioral segmentation** and cohort processing, driving **8k+** conversions within two months.

### Keyvalue Software Systems

Sep 2023 – Feb 2026

Associate Software Engineer (Python, Node.js, React) — Kerala

#### Pencil — B2B AI Ads Platform

- Contributed to migrating large-scale workspaces from PostgreSQL to **Google Cloud SQL**, implementing schema changes and a **custom ORM** that improved API response times by **30%**.
- Designed a **metadata-driven multi-tenant architecture** supporting configurable schemas, custom fields, lookup values, and tenant-specific business logic.
- Migrated document exports from client React rendering to server-side **headless Puppeteer**, resolving custom font injection and formatting drift while boosting PDF speed by **65% (30–40% lower latency)**.

#### Siren — Communication Rails for AI Agents

- Designed and built core communication rails and message protocols powering **multi-agent orchestration** between autonomous AI agents.
- Built the **Siren Agent Toolkit** adhering to OpenAI tool specs for LangChain/CrewAI, and engineered a standalone **Model Context Protocol (MCP)** server that reduced developer setup effort by **~75%**.
- Published open-source packages to npm (@trysiren/agent-toolkit, @trysiren/mcp) and PyPI (siren-agent-toolkit), enabling rapid external integration across agent workflows.

#### Other Client Projects

- Delivered **Salesforce** synchronization under a one-month deadline by designing ingestion APIs, webhooks, and **eventual consistency** workflows, improving API performance by **12%**.
- Streamlined inventory and order processing by implementing robust service architectures, significantly reducing system overhead for e-commerce workflows.

### Tgh Tech

May 2022 – Oct 2022

Full Stack Engineer (Python, Flutter)

- Built a full-stack mental health platform with **Django**, implementing content sharing, anonymous therapist messaging, and appointment scheduling workflows.
- Built and deployed scalable backend services on **AWS**, ensuring reliable performance and secure user experiences.

### Airpmo

Jun 2021 – Dec 2021

Flutter Developer (Part-time)

- Built key **Flutter** features for a construction SaaS platform that streamlined personnel, materials, equipment, and subcontractor operations.
- Improved project collaboration and data synchronization by **~20%** by developing features that connected stakeholders across **10+** active construction projects.

## PROJECTS

### Multi-Task Federated Learning for Deep Neural Networks (Final-Year B.Tech Project)

- Built an AI framework for **federated and multi-task learning**, enabling personalized model training while preserving data privacy across distributed clients. [GitHub](#)

## EDUCATION

### APJ Abdul Kalam Technological University

2019 – 2023

B.Tech, Computer Science and Engineering (Minor in ECE) — Kerala, India

- GPA: **8.43 / 10**
